William Morin-Laberge (40097269)

Adrien Tremblay (40108982)

Pierre-Olivier Trottier (40059235)

A report submitted in partial fulfillment of SOEN390.

Concordia University

February 24th, 2021

1.0 Introduction

In this report, a list of current known defects in the software system will be provided along with their description. To elaborate, the description of each defect will include a summary of what the defect is, and if applicable to the defect, the URL at which the defect occurs and a screenshot demonstrating the defect. Additionally, each defect will be assessed in its level of severity as well as its priority, on a scale of Low – Medium - High. The severity of the defect is assessed to understand how severely the defect affects the software system if unaddressed, and the priority is assessed to determine how urgent the defect must be addressed by the development team. And finally, it will be documented which member found the defect, and which member the defect is assigned to.

1.1 Purpose

For quality assurance purposes, the defects tracking report document is used as a tool for developers and the quality assurance team to develop a bug free software product.

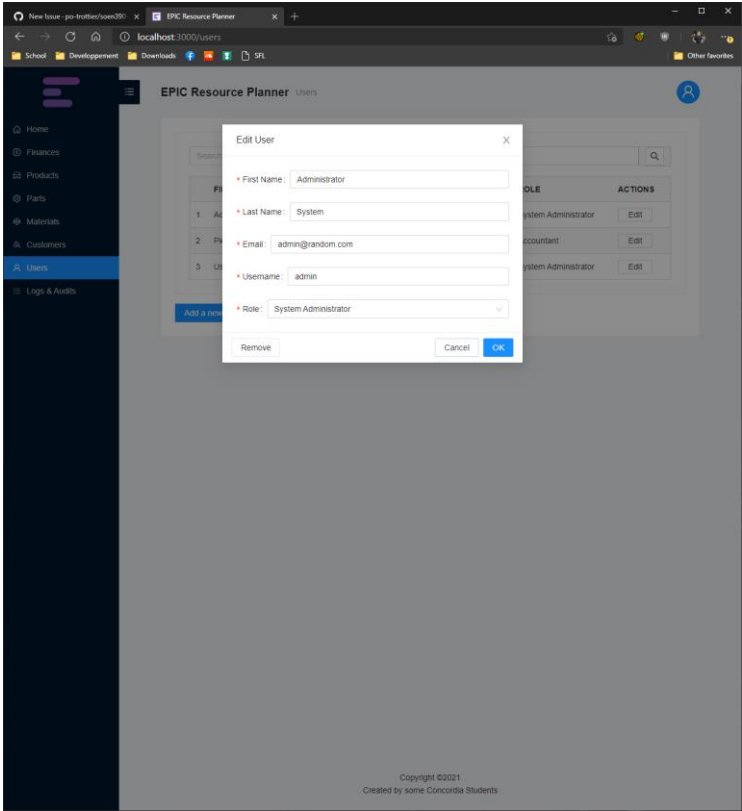

2.0 Defects

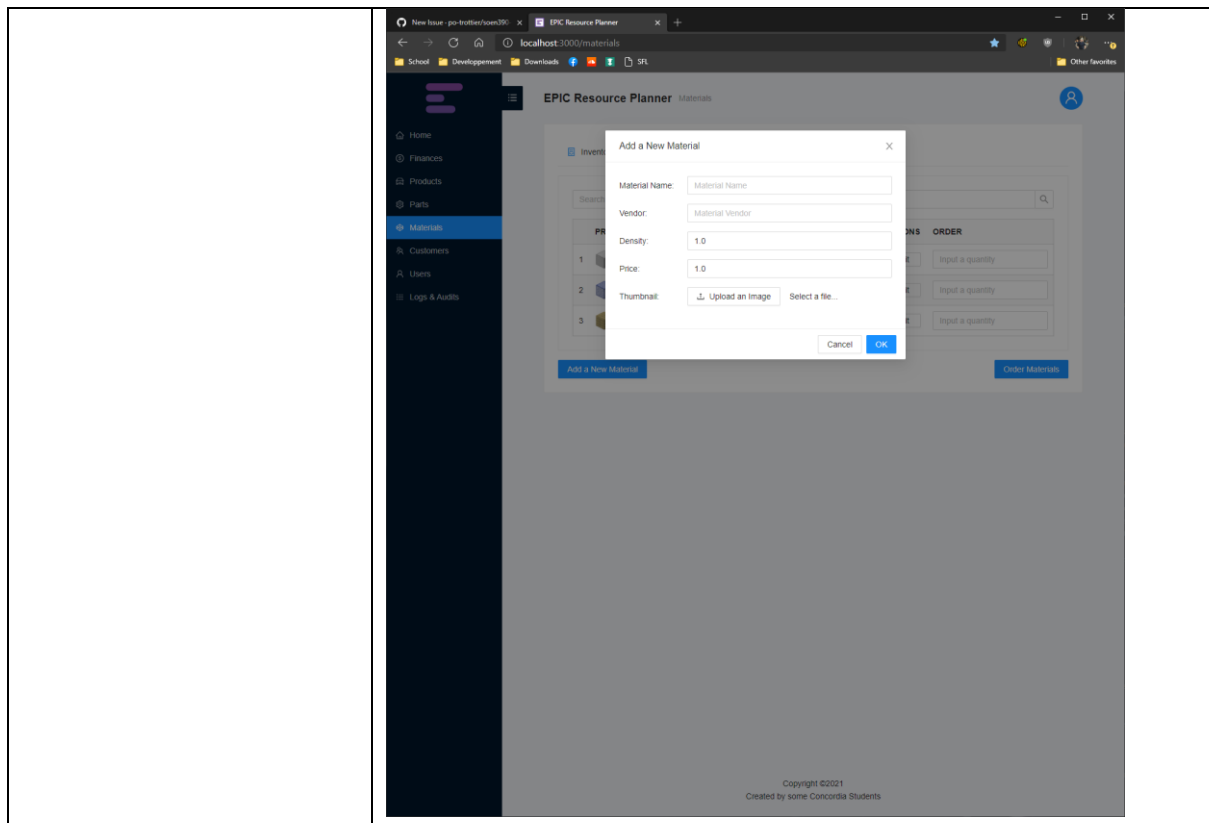

Bug ID	#103
Title	Axios Header Application on Refresh
Reported By	Pierre-Oliver Trottier
Date Reported	February 23 th , 2021
Status	Closed
Bug Description	
Summary	The axios header is not applied on refresh. The axios auth token is not re-added on startup.
Path	<i>None</i>
